Belden Structured Cabling Solutions

The Belden brand is synonymous with high quality, high performance and reliability. Belden products and services cover the following markets – buildings, industrial, infrastructure, broadcast, transport and residential.

Belden offers a wide range of signal transmission products that include networking cables, components and connectivity. Collectively they are designed to deliver high quality performance enhancing the overall capability of the network.

In this newsletter we provide an overview of our latest technology advances, structured cabling products and industry related information. We welcome your feedback.

Product Update

Exceeding the standards and expectations

Next level of Belden Cat 6A products delivers performance beyond the standards

48-Port Ultra High-density Patch Panels

We have extended our successful range of Cat 6A products to include a 1U 48 port ultra high-density patch panel. 10GX® 1U combines unsurpassed density with performance beyond Cat 6A standards. When space is at a premium, these patch panels exceed all expectations, especially in applications such as data centers.

Click [here](#) for the New Product Bulletin.

New RoundFlex 10GX cables

We have introduced a patented Cat 6A cable with a smaller diameter and outstanding mechanical and electrical characteristics. New RoundFlex exceeds the Cat 6A standard having been set to guarantee channel transmission performance up to 625 MHz. The smaller diameter offers greater density while at the same time providing a high level of alien cross talk reduction.

These cables are designed to fit into the Belden IBDN 10GX systems. This means we are not just talking about an improved or boosted Category 6 cable, but a revolutionary innovation designed around a series of dynamic enabling technologies.
