BELDEN CABSAT Preview

At Cabsat (4-6 March Dubai), Belden will present its latest corporate image on ZB-2 together with a wide range of existing and new products of particular interest to cable, satellite, broadcast and communications users in the Middle East and Europe.

Belden is an innovative company and continually introduces new products to the market. Particularly important this year are cable developments for HD and Installable Performance. For example, Belden's high quality Installable Performance is largely due to the use of high density nitrogen gas-injected foam dielectric and the use of small, closed cell bubbles.

New developments and products on show include:

Tactical Fiber cable. This has been significantly upgraded and improved by Belden for broadcast quality. It is primarily used for long haul high definition (HD) transmissions from mobile trucks. The new ITU G.657 standard fiber has full compatibility with G.652.D fibers with low bending loss to enable smaller fiber management (< 0,5dB/km at 1625nm and < 0,2dB/km at 1550nm). It has a core-bonded™ outer jacket and is also available in 2-12 fibers (GMMT8xx) CatSnake™ Four-channel, Heavy-duty Cat5e Snake.
